2.4.1.6 Add IC Number Column in Model

If the application or website does not store the IC number in the database, the developer can add the IC number column to the protected fillable section in the **User.php** file. This approach ensures that the IC number is securely managed and can be updated within the user model while maintaining data integrity.

```
protected $fillable = [  
    'name',  
    'password',  
    'ic_number',  
];
```
